SUMMARY

Computer Science junior at Missouri S&T pursuing minors in Computer Engineering & Mathematics, with experience in software development, Linux systems, backend development, DevOps, and engineering research. Experienced with C/C++, Python, SQL, Linux, databases, and web application deployment. U.S. Army NCO with leadership experience and an active DoD Secret clearance.

EDUCATION

Missouri University of Science & Technology | Rolla, MO

Expected May 2027 | GPA: 3.3

B.S. in Computer Science, Minors in Computer Engineering & Mathematics

Relevant Coursework:

Algorithms, Data Structures, Operating Systems, Computer Networks, Databases & File Structures, Data Science, Computer Organization & Design, Programming Languages, Real Time Systems, Software Engineering

TECHNICAL SKILLS

- Languages: C/C++, Python, SQL, HTML5, CSS, Assembly
- Frameworks & Libraries: Flask, Jinja2, PyTorch, Pandas, Matplotlib, Numpy
- Systems & Tools: Linux, Git, GitHub Actions, Docker, Nginx, MySQL, Cloudflare

EXPERIENCE

Missouri S&T Materials Research Center | Rolla, MO

Undergraduate Research Assistant | May 2024 – Aug. 2024, May 2024 – Present

- Develop Python automation tools for extracting, organizing, and preparing research documents and data for AI-assisted analysis.
- Build reproducible data-processing workflows for research conducted through Critical Materials Innovation Hub.
- Apply software engineering, data analysis, and documentation practices to interdisciplinary materials science research.
- Work with faculty and graduate researchers to organize experimental data and improve research workflows.

Missouri Army National Guard | Various Locations

Sergeant / Team Leader | Jun. 2020 – Present

- Entrusted with accountability of sensitive equipment valued over \$500K.
- Led and trained an 8-person team, coordinating personnel, equipment, logistics, and mission requirements in time-critical environments.
- Apply troubleshooting, systems thinking, documentation, and operational planning to maintain readiness.
- Active DoD Secret clearance

PROJECTS

Personal Linux Server & Website Infrastructure (*Python, Flask, Linux, Nginx, MariaDB, Cloudflare*) | [GitHub](https://github.com)

- Designed and maintain a Linux-based home server hosting personal web applications and services.
- Deploy Flask applications using Nginx as a reverse proxy and Gunicorn as the WSGI application server.
- Manage MariaDB databases, SSH access, DNS, networking, server configuration, and application deployment.
- Configured Cloudflare Tunnel for secure external access without directly exposing the server to the public internet.
- Maintain deployment and configuration workflows using Git and GitHub.

Gym-Manager (*Python, SQL, Database Systems*) | [GitHub](https://github.com) [W.I.P]

- Developing a database-backend web application for managing gym members, staff, trainers, exercises, and memberships.
- Designed a relational database schema with constraints to maintain data integrity and consistent relationships.
- Implemented SQL CRUD operations and reporting queries for membership status, activity history, and performance data.
- Built a web-based interface using Flask and Jinja2.
